Vishal (.NET)

ProfileSummary

- A goal-oriented highly motivated .Net developer with more than 2 years of experience in application development using HTML, JavaScript, JQuery, C#, MSSQL Server,ASP.NET,MVC, project management software such as Devops,GItLab,Git and other related server technologies usedto implement .NET applications.
- Demonstrated ability to work in team and accomplish task under minimal direction and supervision.

Skills

C#,VB.net(ASP.NET,WEBFORM,MVC),JavaScript ,MSSQLServer JQuery,MYSQL Server,MSSQL, PostGres,LINQ,API Integration,Restful apis

OrganizationalExperience

- Cs Soft Solutions Pvt Ltd Mohali   Jr Software Engineer   Feb 2022-Mar 2023

- Tricky Web Solutions Pvt Ltd Mohali   Asp,net Developer   March 2023- July 2024

Role & Responsibility:

- **Understand Requirements**: Work with the team to understand what the project needs to do.

- **Write Code**: Develop features and fix bugs using C# and .NET.

- **Test Code**: Ensure everything works by writing tests and fixing any issues.

- **Collaborate**: Work with other developers, designers, and testers to complete tasks.

- **Deploy and Maintain**: Help with deploying the application and fixing issues after it's live.

- **Documentation**: Write simple guides for future use.

Projects :-

IJSER.org : I created an admin panel where the administrator can view the number of thesis and papers submitted, and send customized payment links to students. The admin can filter the submitted papers, send certificates along with payment details, and manage the dynamic process for publishing these papers and theses. Additionally, I developed a thesis submission process where users can access their thesis after successful payment. I integrated PayPal, Stripe, and Lemon Squeezy payment gateways and deployed the application.

castingworkbook.com : Casting Workbook's fully integrated system is used by actors, agents, casting directors, producers, directors, studios, and networks to efficiently create, organize, and distribute valuable information. In this project, I developed the frontend from scratch without disrupting the existing site. The client's requirement was to redirect users who registered after 2023 to the new site, while older users continued to access the old site. I created pages to help select the right actors to bring characters to life, ensuring that the final product resonates with audiences. I also integrated Plyr (video player), allowing users to upload their work videos for directors. Several pages were built for users to upload photos, resumes, and albums. This platform is primarily designed for actors and directors, enabling actors to showcase their work through photos, videos, and resumes.

moxiefieldopsapp.azurewebsites.net : This site provides protection from harmful insects that can cause public health issues and costly property damage. I created the admin panel from scratch, allowing administrators to add or remove managers and their team members. There are pages for rating the performance of these members, and all pages are dynamic, ensuring the site operates efficiently. Google authentication is integrated, and the system includes calculations for evaluating and observing performance, enabling the admin to calculate the average and percentage of ratings.

myoutdooragent.com : This platform is related to property sales, purchases, and leasing in the U.S. The admin has control over user access and can manage property listings and amenities. Additionally, a Connect payment integration is implemented to facilitate property payments.We can available and searchable to qualified users nationwide.include specific amenties,set lease dates and pricing.

Proxi5 : This platform allows users to post ads on the site, which are subject to admin approval. Once approved, users can pay for the ads using Stripe, which is integrated for payment processing.

Fip (Forest Information Portal) : landowners may have multiple offices that they are trying to juggle data and updated records for. With high volumes and various locations, each regional management team typically has different methods of record keeping and filing in place. Thus, miscommunications and things that just naturally fall through the cracks. FIP helps prevent these issues before they arise. FIP software creates one space for all of your forest management needs in a central, cloud-based application. Designed for integration, this web-based application allows members of your organization to:
1. share information;
3. increase collaboration;
4. manage documents;
5. improve security and flexibility of workflows; and
6. fully simplifying your landownership.
To make this application most beneficial to the needs of your organization, FIP is made of nine modules that you can choose from to tailor the application to fit your business needs.
Forest Management, Forest Budget, Inventory Management, Document Management, Reports.

OtherSkills

- Design,develop and modify Microsoft ASP.NET Applications.

- Deploy,Test and create reports in Telerik reportingTool.

- Asp.net Core,Razor Pages.MVC ,Asp.net Webforms and Vb.net

- Javascript,Jquery,Ajax

- Sql Server, PostgreSQL

- Azure Devops,Github,GitLab,Trello,Jira,Zoho

- Kendo UI (Telerik Controls)

AcademicDetails

- Completed BCA from DAV
- Completed 10+2 (Science) HP
- Completed MCA from LPU Jalandhar,Punjab.
